

I can guess your phone number

If you don't believe me, grab a
calculator and try this

Type in the first 3 digits of
your number (not your area code)

Now multiply by 80

Add 1

Multiply by 250

Add the last 4 digits of
your phone number

(Ex: If your phone # is 123-4567 you add 4567)

Add the last 4 digits of
your phone number (again)

Subtract 250

Divide by 2

What did you get?

+5 Extra Credit

Write and solve an equation that shows why this always works.
